

\$11.5M SEED · VIRTUAL PATIENT TESTING

Inner Logic raised \$11.5M to test medical devices on virtual patients.

Their homepage doesn't name a single customer. A five-part read on the marketing.

RECALL

01
CENTRICITY

THE READ

No visible copy means no visible customer. The device makers and surgeons who'd buy this never appear on the page.

THE FIX

Put the surgeon in the first line. "Test your device on 10,000 patients before you touch a real one."

02 LEGIBILITY

THE READ

The one-line pitch works in the press coverage. On the site itself, the job to be done is invisible.

THE FIX

Say the job on the page, not just in TechCrunch. "Virtual patients for procedural device testing." Above the fold.

03
EDGE

THE READ

"Virtual patients for procedural devices" is genuinely differentiated. The site never claims it out loud.

THE FIX

You own a category no competitor can say. Lead with the wedge — make it the headline, not a footnote.

04
ARGUMENT

THE READ

Autonomous surgery is a real thesis. It lives in TechCrunch, not on innerlogic.ai.

THE FIX

Move the belief onto the homepage. If devices should be proven in silico first, say it — and dare the reader to disagree.

05 RECALL

THE READ

"Inner Logic" is a clean rename from Semaphor — quietly confident, easy to remember after one pass.

THE FIX

The name is doing its job. Give it a visual identity as sure of itself as the word.

THE THROUGH-LINE

A genuinely novel product, hidden behind a homepage that says almost nothing. The technology is differentiated. The story isn't on the page yet.
